SSU-Secure Wi-Fi Access on Chrome OS

There are many types of operating systems and devices that have WPA2-Enterprise capabilities and may work with SSU-SECURE. Information required to configure a device to connect to SSU-SECURE using WPA2-Enterprise is listed below. If you require assistance configuring your device with these settings, consult the vendor-provided help for your device (ex: manual or website).

Configuration	Setting
Wireless SSID	SSU-SECURE
EAP Method	PEAP
Phase 2 Authentication	MSCHAPv2
Server CA certificate	Do not check/Do not validate
Identity	SOLAR\Seawolf ID
Password	Your Seawolf ID Password
Anonymous Identity	Leave Blank

Not every device is capable of connecting to SSU-SECURE. If the above settings do not allow you to connect, we recommend that you use SSUWLAN.
