SSU Secure Wi-Fi Access for Windows 7

1. Click the Wireless Network icon in the bottom right corner of your desktop and choose to connect to SSU-Secure

2. If prompted, enter your Seawolf ID and password and click OK. If the username and password prompt does not show up, continue to the next step

3. Select the “Connect” button
4. If you are not able to connect to SSU-Secure, you may need to forget the network. To forget the SSU-Secure wireless network, click the start menu and type “Control Panel” and select the Control Panel icon. Choose Network and Internet, and then click Network and Sharing Center.

5. In the left sidebar, choose Manage Wireless Networks.
6. Select SSU-Secure in the list of wireless networks and right-click to “Remove” the network.
